Basic guidelines before running the app.

1. Install all the python dependencies specified in the *requirement.txt* file.
2. Once the installation is done run *python app.py* from root path to start the app at localhost *127.0.0.1:3000* (You can configure the port no. from *constant.py* file in *utils folder*)
3. Once the app is started, signup for any user or use a pre-created user with id : *test* and password: *test*
4. There is login guard that will ensure only the authentic user is active in a browser per session.
5. In order to login with different user, logout and then login again with the different credentials.
